

The USB Adjustable Ergonomic Keyboard

Model Numbers

GTU-0033 - USB Ergonomic Split Keyboard (Putty)

GTU-0077 - USB Ergonomic Split Keyboard (Black)

The USB Adjustable Ergonomic Keyboard has the same key layout as the GTN model of the keyboard and is compatible with USB.

By "compatible" we mean that the USB ergonomic keyboard will function as an input device with other computers that have a USB port. The keys of the USB ergonomic keyboard are arranged in a PC layout and the layout cannot be modified. The PC key layout is different from the key layout on many keyboards intended for use exclusively with Apple computers. Certain keys used frequently in Apple applications may not be as conveniently located in the PC layout. Before selecting a USB ergonomic keyboard for use primarily with an Apple computer you should consider whether the PC key layout is comfortable and convenient for your computer use.

KeyOvation does not at this time offer an ergonomically adjustable keyboard with a key layout intended for use exclusively with Apple computers.

The ability to adjust the USB Ergonomic Keyboard to reduce ulnar deviation by splaying the keyboard halves and to reduce excessive pronation by tenting the keyboard halves is functional regardless of the type of computer the keyboard is used with.

Encourages you to assume a natural, comfortable posture

The USB Adjustable Ergonomic Keyboard allows you to adjust the two alphanumeric sections both horizontally and vertically to suit your individual body requirements. This helps you assume a more natural posture that is conducive to improving comfort and productivity while using your computer.

FEATURES INCLUDE:
